Diamond Soft Bedding

Teklad 7089

Envigo Teklad 7089 Diamond Soft Cellulose Bedding material is a unique laboratory animal bedding consisting of specially-processed hardwood paper pulp. This type of paper pulp is used extensively as a cellulose source in the manufacturing of many types of highly-absorbant consumer paper products.

Product Features & Benefits:

- + **Soft** - Softest contact bedding material available, providing maximum animal comfort
- + **Nestability** - Animals nest and burrow in the material, providing excellent environmental enrichment; may help improve nesting and breeding performance
- + **Bright White Color** - Improved animal observations
- + **Highly Absorbent/Controls Ammonia** - Allows for reduced cage changes in many applications, and also requires less bedding per cage on a *weight* basis
- + **Biosecurity** - This extremely clean material is produced in a plant that is dedicated to the production of laboratory animal bedding products, in which maximum levels of quality control and vermin control are employed

- + **Quality Control** - The non-certified 7089 is screened at least twice every year for potential contaminants, making it a very highly-defined material
- + **Toxicology Studies** - The certified/*irradiated* version (7989C) is an excellent contact bedding choice for GLP toxicology studies, when alternatives to wire bottom cages are desired or required
- + **Ease of Disposal** - Biodegradable and can be easily incinerated

Packaging:

- + **Teklad 7089 Diamond Soft** is packaged in 20 lb. (9.07 kg) autoclavable bags.
- + **Teklad 7989C.20 Certified/Irradiated Diamond Soft**, also 20 lbs. (9.07 kg), is packaged in a poly-lined inner cap sac inside a 3-ply protective paper bag, to insure purity and integrity.
- + **Teklad 7989C.20 Certified/Irradiated Diamond Soft** vacuum packages, 4 x 5 lb. (2.27 kg) packages per case.
