

# Genetic Monitoring Report

Test Report Date: March 2021

Location: France	Genetic Monitoring Results			Species: Mouse	
Model	Most Recent Test Date	Recent Results Tested/Passed	Historical Results <sup>a</sup> Tested/Passed	Test Frequency	Number of SNP Markers Tested
BALB/cOlaHsd-Foxn1 <sup>nu</sup>	1-Mar-21	13 / 13	33 / 33	Annually	48
C.B-17/IcrHan®Hsd-Prkdc <sup>scid</sup>	1-Mar-21	3 / 3	27 / 27	Annually	48
C.B-17/IcrHsd-Prkdc <sup>scid</sup> Lyst <sup>bg-J</sup>	1-Mar-21	4 / 4	24 / 24	Annually	48
C57BL/6BrdCrHsd-Tyr <sup>c</sup>	1-Mar-21	2 / 2	7 / 7	Annually	48
NOD.Cg-Prkdc <sup>scid</sup> /NCrHsd	1-Mar-21	4 / 4	24 / 24	Annually	48

**Testing Laboratory:** Bionomics Research Technology Center, Piscataway, NJ

Inbred strains at each production location have been tested using a custom panel of 48 Single Nucleotide Polymorphism (SNP) markers. Tests are conducted quarterly on all new inbred foundation colony breeding cages in non-isolator bred colonies. Tests are conducted on all foundation colony cages in newly populated isolator bred colonies, and then five (5) foundation colony breeder cages annually thereafter. Select outbred stocks at each production location have been tested using a custom panel of 96 Single Nucleotide Polymorphism (SNP) markers. Tests are conducted annually on select outbred colonies.

**Report Notes:**

<sup>a</sup> Historical results include 18 months of cumulative data

Sheryl Wildt, MS, MBA, CMAR  
Global Manager of Genetic Quality and Breeding
