C57BL/6NHsd	1-Dec-19	22 / 22	241 / 241	Quarterly	48
CBA/JCrHsd	1-Dec-19	12 / 12	85 / 85	Quarterly	48
DBA/10laHsd	1-Dec-19	13 / 13	32 / 32	Quarterly	48
DBA/2NHsd	1-Dec-19	11 / 11	71 / 71	Quarterly	48
FVB/NHsd	1-Dec-19	11 / 11	30 / 30	Quarterly	48
SJL/JCrHsd	1-Dec-19	24 / 24	85 / 85	Quarterly	48
C.B-17/IcrHsd-Prkdc ^{scid}	1-Mar-19	28 / 28	28 / 28	Annually	48
C.B-17/IcrHsd-Prkdc ^{scid} Lyst ^{bg-J}	1-Mar-19	16 / 16	16 / 16	Annually	48
NOD.CB17-Prkdc ^{scid} /NCrHsd	1-Mar-19	25 / 25	25 / 25	Annually	48
Hsd:ICR(CD-1 [®])	1-Mar-19	140 / 140	140 / 140	Annually	96

Testing Laboratory: Bionomics Research Technology Center, Piscataway, NJ

Inbred strains at each production location have been tested using a custom panel of 48 Single Nucleotide Polymorphism (SNP) markers. Tests are conducted quarterly on all new inbred foundation colony breeding cages in non-isolator bred colonies. Tests are conducted on all foundation colony cages in newly populated isolator bred colonies, and then five (5) foundation colony breeder cages annually thereafter. Select outbred stocks at each production location have been tested using a custom panel of 96 Single Nucleotide Polymorphism (SNP) markers. Tests are conducted annually on select outbred colonies.

Report Notes:

^a Historical results include 18 months of cumulative data

Sheryl Wildt, MS, MBA, CMAR
